To Whom It May Concern,

I have been using the Contour 1 device from Ultrashape since February 2006 and have been pleased with it. There have been 375 treatments administered to 200 patients. The areas of the body treated have been the abdomen, waistline and outer thighs.

The technician who was trained by the company and me has been administering the treatments for a year and a half. She has been pleased with the use of the machine and the satisfactory results obtained for the clients.

We have not seen any major untoward events or complications as a consequence of these treatments. Patients are comfortable during the treatments and have not reported any unusual after effects.

We will continue with treatments using the Contour 1 and look forward to whatever improvements and advancements the company will produce.

Sincerely,

Dr. Michael Feinerman, FACS
